How to set up  
2 door mantrap  
in PROS CS

A037

Mantrap (Interlock) is a feature that enables Door2 to be open, only if Door1 is closed. In order to use this feature, you need to have door sensors on both doors.

Go to the controller/right click/Properties. Then go to the Advanced tab and mark both doors as mantrap doors. From then on, Door 1 can be open only if Door 2 is closed and vice versa.
